

68_Customer Placing the Largest Number of Orders Easy - Solution

Source - <https://leetcode.com/problems/customer-placing-the-largest-number-of-orders/description/>

Running Notes:

- Write a solution to find the `customer_number` for the customer who has placed **the largest number of orders**.

The test cases are generated so that **exactly one customer** will have placed more orders than any other customer.

Well turns out the mistake I made was not scrolling to see the follow up

```
-- Write your PostgreSQL query statement below
SELECT customer_number
FROM Orders
GROUP BY customer_number
ORDER BY COUNT(customer_number) DESC
LIMIT 1
```

very easy question, first I found out the count, order by the count in desc, used limit 1 to find the largest number of orders
