90_Number Of Bathrooms And Bedrooms Easy - Solution

Source - https://platform.stratascratch.com/coding/9622-number-of-bathrooms-and-bedrooms?code_type=1

Running Notes -

- Find the average number of bathrooms and bedrooms

  // use the avg formula

- For each

  - city

    - property type

  // this gives me a hint that I am grouping by the city and property type because I need to find it for each city each property type

- Output - city | property type | n_bathrooms_avg | n_bedrooms_avg

So below is the code -

```
select city, property_type,
AVG(bathrooms) as n_bathrooms_avg, AVG(bedrooms) as n_bedrooms_avg
from airbnb_search_details
group by city, property_type;
```
